

Archetype Scorer / Grader / Weighter - System v2.2 Corrected Team Roles

This correction uses the uploaded role-on-team file as the source of truth. The player index updates Role on Team from the corrected season/player/team-role file, removes tags/badges from the working system, and keeps profiles as proof/shrinkage packages rather than duplicate role labels.

Position Layer	Primary/secondary PG, SG, SF, PF, C. Guard/wing/big are metadata only.
Role on Team	Corrected from uploaded season + player_name + effective player role. Sets leverage, sample, and responsibility context.
Role on Court	Broad offensive and defensive responsibility families. This is the job.
Proof Profiles	Generated from corrected Role on Team + offensive/defensive Role on Court. This is how the job is graded and shrunk.
No Tags/Badges	Excluded from this version to keep the system shippable before adding hyper-specific modifiers.

Layer	Question it answers	Allowed values / outputs	Scoring purpose
Position	Where does he play?	Primary position + optional position flag	Sets position priors, lineup stress, and role-portability priors.
Role on Team	What is his actual team/rotation role?	Corrected role: Franchise Cornerstone, Heavy-Minute Starter, Tactical Starter, Sixth Man, Core Rotational, Specialist, Energy, Garbage Time, DNP, etc.	Adjusts effective sample, leverage, and how hard to trust raw production.
Role on Court	What job is he asked to perform?	Offensive Role + Defensive Role	Selects broad responsibility family and component relevance.
Proof Profiles	How should that job be proven and shrunk?	Generated offensive/defensive proof profile from corrected team-role + court-role combination	Selects prior bucket, prior strength, proof signals, and TCV shrinkage examples.
Archetype Label	What readable identity appears in UI?	Scouting-style label or generated summary	Human-facing summary only; not the primary scoring key.

Correction audit: 408 player rows were matched to the corrected role-on-team file using latest available season per player. 27 rows were not present in the corrected role file and are marked Needs Review rather than guessed.

2. Scoring architecture and profile distinction

Role on Court is the broad job. Proof Profile is the scoring/shrinkage package generated from corrected Role on Team plus that broad job. If a profile does not change the prior, proof standard, or shrinkage example, it should not exist.

Scoring block	Formula / Logic	Purpose
Offensive proof profile score	$\text{OffScore} = \text{sum}(\text{offWeight}_j \times \text{normalizedOffSignal}_j)$	Grades offense against the proof model implied by corrected team-role + offensive role.
Defensive proof profile score	$\text{DefScore} = \text{sum}(\text{defWeight}_j \times \text{normalizedDefSignal}_j)$	Grades defense against the proof model implied by corrected team-role + defensive role.
Role on team modifier	$\text{TeamRoleMod} = f(\text{leverage, minutes burden, rotation stability, responsibility})$	Changes opportunity context and effective sample; does not replace skill scoring.
Bayesian reliability	$\text{Posterior} = w \times \text{observed} + (1-w) \times \text{role_profile_prior}; w = \text{priorSD}^2 / (\text{priorSD}^2 + \text{SE}^2)$	Shrinks noisy/context-dependent production toward the correct proof-profile prior.
Final grade	$\text{Final} = \text{clamp}(0, 100, \text{TeamRoleMod} \times \text{PositionFit} \times (\text{OffScore} + \text{DefScore}) \times \text{EvidenceReliability} - \text{VolatilityPenalty})$	Transparent 100-point grade converted to A+ to F.

Term	Meaning in this version	Example
Offensive Role	Broad offensive responsibility	Interior Finisher / Vertical Threat
Offensive Proof Profile	Shrinkage/proof package from corrected Role on Team + offensive role	Core Rotational Player / Interior Finisher Proof Profile
Defensive Role	Broad defensive responsibility	Backline Anchor
Defensive Proof Profile	Shrinkage/proof package from corrected Role on Team + defensive role	Heavy-Minute Starter / Backline Anchor Proof Profile
Tags/Badges	Not active in this version	No badge layer; detailed modifiers live inside component shrinkage examples only.

3. Corrected Role on Team vocabulary

The corrected file provides effective team role. That role is transformed into the nine-label Role on Team vocabulary and then mapped into the three extended families for shrinkage behavior.

Extended family	Role on Team	Shrinkage meaning
The Starters	Franchise Cornerstone	Highest responsibility; team outcomes validate or shrink high-usage claims.
The Starters	Heavy-Minute Starter	Stable sample; expect two-way survival and lineup portability.
The Starters	Tactical Starter	Matchup/context starter; avoid overrating starter label without closing trust.
The Bench (Rotational)	Sixth Man / Impact Sub	High bench responsibility; shrink if production is bench-only or star-dependent.
The Bench (Rotational)	Core Rotational Player	Role clarity matters; value judged by fit, stability, and survivability.
The Bench (Rotational)	Situational Specialist	Narrow role cap; strong sample/matchup shrinkage unless skill is proven.
The Bench (Rotational)	Energy / Spark Plug	Activity must convert to value; empty-energy signals shrink toward role prior.
The Non-Players (DNP)	Garbage Time Player	Low leverage; effective sample is heavily discounted.
The Non-Players (DNP)	Active DNP	No court-value grade without evidence; maintain scouting/profile placeholders only.
The Non-Players (DNP)	Inactive / Roster Filler	Inactive state; do not infer modeled role value from absence.

Scoring rule: Role on Team changes effective sample size and responsibility burden. It does not replace the actual offensive/defensive skill grade.

4. Role on Court - broad responsibilities

Role on Court stays broad. Specific shrinkage behavior comes from proof profiles and component examples, not tags/badges.

Offensive Role	Definition	Defensive Role	Definition
Primary Offensive Engine	Main driver; creates first advantage, controls usage, initiates late-clock offense.	Primary Point-of-Attack Defender	Guards main ballhandler; pressures first action and prevents shell break.
Secondary Creator	Attacks after defense is bent or when primary engine sits; creates second-side advantages.	Secondary Guard Defender	Handles guards without usually taking top creator; supports POA.
Table-Setting Organizer	Runs structure, manages tempo, limits chaos, and keeps offense functional.	Wing Stopper	Takes scoring wings and bigger perimeter creators.
Advantage Connector	Keeps advantages alive through fast decisions, passes, and closeout attacks.	Switch Defender	Survives multiple matchup types without immediately creating a weak point.
Off-Ball Gravity Scorer	Bends defense without the ball through movement, relocation, screening, cutting.	Screen Navigator	Gets through/around/under screens while staying attached.
Stationary Spacer	Occupies a defender as a catch-and-shoot threat.	Backline Anchor	Organizes near rim, protects paint, calls coverage, ends possessions.
Movement Shooter	Runs off screens, relocates, uses handoffs, forces chases.	Drop Coverage Big	Plays below screen level protecting rim while containing PnR.
Rim Pressure Driver	Gets downhill, touches paint, creates rim pressure, FTs, kickouts, dump-offs.	Switch / Show Big	Defends high; switches, shows, blitzes, hedges, recovers, handles space.
Interior Finisher / Vertical Threat	Finishes lobs, dump-offs, rim runs, seals, cuts, dunker-spot chances.	Roaming Help Defender	Stunts, digs, rotates, blocks weak side, disrupts as free safety.
Screen / Roll Hub	Creates through screens, handoffs, rolls, slips, short rolls, coverage decisions.	Low-Man Firefighter	Weakside emergency helper preventing layups, tagging rollers, forcing kickouts.
Post / Elbow Hub	Operates from post/elbow/nail as scorer, passer, handoff hub, organizer.	Defensive Rebound Finisher	Ends possessions through boxouts, boards, second-chance prevention.
Late-Clock Bailout Option	Receives grenades, creates tough shots, draws fouls, salvages broken plays.	Disruption / Event Defender	Creates steals, deflections, blocks, strips, charges, chaos; gamble context matters.

5. Proof profiles and TCV component shrinkage map

For every player, corrected Role on Team combines with offensive and defensive role to generate the proof profiles and the component-specific shrinkage examples.

TCV component	Primary proof-profile source	What the shrinkage example checks
COV	Offensive proof profile + corrected Role on Team	Creation/orchestration ownership: hub validation, assist inflation, empty control, preservation.
IIB	Corrected Role on Team + combined court roles	On/off context: lineup collinearity, bench-only production, teammate overlap, opponent luck.
MIV	Offensive proof profile + role interaction	Movement/interaction: useful movement, empty activity, role interaction, matchup context.
SGV	Offensive proof profile	Spacing/gravity: stationary vs movement shooting, star-created looks, corner-only dependence.
PVA	Offensive proof profile + corrected Role on Team	Possession ownership: self-created vs assisted, endpoint finishing, receiver vs creator credit.
DSV	Defensive proof profile + corrected Role on Team	Suppression: matchup quality, protected roamer, no-center splits, foul/rebound support.
PTV	Corrected Role on Team + portability	Translation: high-leverage validation, starter vs bench portability, playoff-style survival.
RPV	Defensive proof profile + position	Rebounding/possession ending: contested vs uncontested, team lift, playing up/down.
DPC	Defensive proof profile	Defensive pressure/control: events, fouls, blow-bys, shell survival, gamble validation.
SAV	Offensive proof profile	Shot/score value: shot posterior, late-clock context, shot difficulty, small-sample shooting.

The companion CSV includes corrected team-role fields plus COV/IIB/MIV/SGV/PVA/DSV/PTV/RPV/DPC/SAV_shrinkage_example columns.

6. Corrected player proof-profile index

Role on Team below uses the corrected role file where matched. Unmatched players are marked Needs Review and should not be treated as corrected-role rows.
